

NMR Application Scientist

The company:

Tecmag is an established magnetic resonance hardware manufacturer which has been serving the NMR community for 35 years. Acorn NMR has been offering customized NMR service for the last 28 years. Acorn was acquired by Tecmag in 2019 with the goal of continuing to offer the same type of quality services to new and existing customers.

The position:

We are looking for an NMR application scientist to oversee the NMR service operation. Acorn NMR receives samples for analysis from companies engaged in many different types of research. The successful candidate will work with customers to provide NMR data directed toward solving a wide variety of problems.

The position requires experience in small molecule NMR including structure determination, working knowledge of organic chemistry, and good communication skills.

Prior experience with JEOL and Varian/Agilent hardware is a plus.

The candidate will also be responsible for routine maintenance of spectrometers and supervision of our application laboratory.

The location:

Tecmag/Acorn is based in Houston, TX. Our city is well known for being the home of NASA and one of the largest medical center in the world. It offers a vast array of entertainment venues and culinary experiences. Houston area suburbs are home to some of the best school district in the United States and the cost of living is low compared to most large cities.

The benefits:

A competitive benefit package including health and paid vacation
